Foreword

Waimate District Council is pleased to provide the next iteration of our Waste Management and Minimisation Plan. This document builds on the successful implementation of our four-bin kerbside collection service in mid-2021. Whilst this success means that the district has surpassed national targets ahead of time, there are still significant opportunities arising from the New Zealand Waste Strategy.

The objectives, goals and performance reporting detailed within this plan will inform the 2025-2034 Long Term Plan and ensure that waste minimisation continues to be a core activity for Waimate District council.

This plan is presented in three parts:

Part A The Strategy: contains core elements; vision, goals, objectives, and targets. It sets out what we are aiming to achieve and the broad framework for working towards the vision.

Part B Action Plan: sets out the proposed actions to be taken to achieve the goals, objectives, and targets set out in Part A. Part B also shows how we will monitor and report on our actions and how they will be funded.

Part C Supporting Information: contains the background information that has informed the development of our Waste Management and Minimisation Plan (WMMP). Most of this information is contained in the joint Waste Assessment (WA).

Part A – Strategy

1 He kupu whakataki / Introduction

Waimate District Council (Council) has a statutory responsibility to promote effective and efficient waste management and minimisation within the Waimate District (Section 42, Waste Minimisation Act 2008 (WMA)). In order to do this, the Council is required to adopt a Waste Management and Minimisation Plan (WMMP) under Section 43 of the Act.

This WMMP is a guiding document which identifies Council's vision, goals, objectives, targets and methods for achieving effective and efficient waste management and minimisation. It also provides information on how Council intends to fund the activities of the WMMP over the next six years.

In addition to the legislative framework in which this WMMP has been developed, it has also been developed in the context of the New Zealand Waste Strategy 2023 (NZWS). The NZWS sets out the long-term policy priorities for waste management and minimisation and has a vision for 2050:

By 2050, New Zealand is a low-emissions, low-waste circular economy. We cherish our inseparable connection with the natural environment and look after the planet's finite resources with care and responsibility.

The NZWS has the following eight goals:

1. Systems:

The Strategic planning, regulatory, investment and engagement systems are in place and operating to drive and support change.

2. Infrastructure:

We have a comprehensive national network of facilities supporting the collection and circular management of products and materials.

3. Responsibility and accountability:

We all take responsibility for how we produce, manage and dispose of things, and are accountable for our actions and their consequences.

4. Using less:

We use fewer products and materials, and using them for longer, by making them more durable, and repairing, reusing, sharing and repurposing them.

5. Resource recovery systems:

Resource recovery systems are operating effectively for core materials and across all regions.

6. Recovering value:

We look for ways to recover any remaining value from residual waste, sustainably and without increasing emissions, before final disposal.

7. Emissions:

Emissions from waste are reducing in line with our domestic and international commitments.

8. Contaminated land:

Contaminated land is sustainably managed and remediated, to reduce waste and emissions and enhance the environment.

Council has also considered the waste minimisation hierarchy of reduce, reuse, recycle, recover, treatment and disposal in the development of this WMMP (Figure 1). This plan should be read in association with the joint Waste Assessment (WA) for Waimate, Timaru and Mackenzie District Councils attached as Part C to this WMMP.

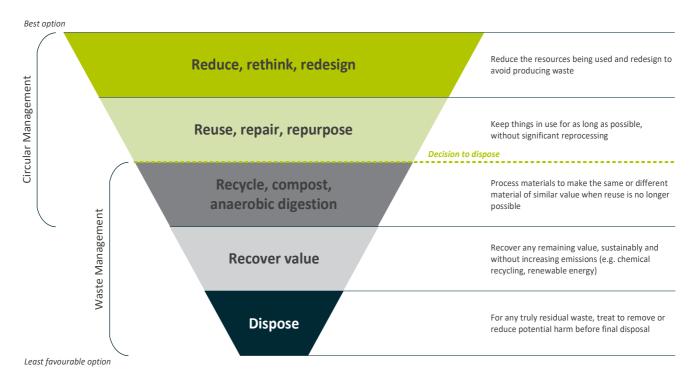

Figure 1 Circular management and waste management within the waste hierarchy

2 He aha ona putaketanga? / What informs the plan?

There is a clear legislative and policy framework within which the Council provides waste services and facilities within its District. A summary of the applicable legislation is detailed below.

Key legislation affecting waste is:

- Waste Minimisation Act 2008
- Local Government Act 2002
- Resource Management Act 1991
- Climate Change Response Act 2002 (Emissions Trading)
- Litter Act 1979
- Health Act 1956.

While the WMA sets out the legislative requirement for solid waste, the NZWS provides the government's strategic direction for waste management and minimisation in New Zealand. The goals of this WMMP replicate those from the NZWS.

Local, regional and national plans and policies affect the Council's provision of waste and diverted material services. Primarily, they are requirements under the WMA and the Local Government Act 2002.

Figure 2 shows the council's planning and policy framework with alignment from legislative requirements to operational policies. There needs to be alignment between the council's key planning documents, this is the WMMP, bylaws and the operational policies.

The Long-Term Plan (LTP) is a key district plan to support the WMMP initiatives. The LTP identifies increased diversion and reduced waste generation as key performance measures, together with high customer satisfaction ratings for kerbside collections and facilities at our Resource Recovery Park (RRP).

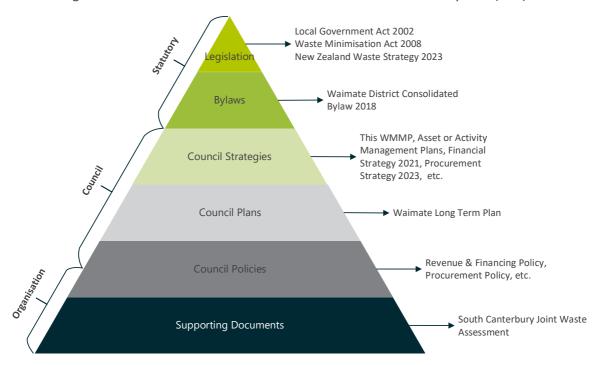

Figure 2 Planning framework for strategic documents

Te tirohanga, nga whainga, nga whaainga, nga kaupapa here me nga whaainga / Vision, goals, objective, policies, and targets

Working together, Council and the community can achieve more effective and efficient waste management and minimisation in the district. Council is proposing the following vision, goals, objectives, and targets. Taken together these form the strategy for Council's WMMP. The objectives for the sub-region have been adopted by Waimate as our objectives.

3.1 Vision for the future

Our vision for the future is:

"By 2050, the South Canterbury Region is a low-emissions, low-waste society built upon a circular economy".

3.2 Goals, objectives, policies and targets

3.2.1 Goals and objectives

The Councils have adopted the NZWS 2030 goals and developed South Canterbury objectives that support the achievement of these goals. The NZWS states that "By 2030, our enabling systems are working well, and behaviour is changing". The NZWS goals and South Canterbury objectives are shown in Table 1.

Table 1 NZWS goals and South Canterbury objectives

#	NZWS Goals	South Canterbury Objective
1	Systems The strategic planning, regulatory, investment and engagement systems are in place and operating to drive and support change	Implement new national planning, regulatory, investment and engagement systems to continue to drive change in South Canterbury.
2	Infrastructure We have a comprehensive national network of facilities supporting the collection and circular management of products and materials	 South Canterbury facilities, both Council and private, support collection and circular management of products and materials in the sub-region. Local planning provisions support the circular economy.
3	Responsibility and accountability We all take responsibility for how we produce, manage and dispose of things, and are accountable for our actions and their consequences	Deliver behaviour change programmes in South Canterbury to increase awareness and accountability for waste minimisation.
4	Using less We use fewer products and materials, and use them for longer, by making them more durable, and repairing, reusing, sharing and repurposing them	Support local redesign, repair, reuse, sharing and repurposing initiatives.
5	Resource recovery systems Resource recovery systems are operating effectively for core materials and across all regions	Existing kerbside services and resource recovery facilities enable core materials to be collected across South Canterbury.
6	Recovering value We look for ways to recover any remaining value from residual waste, sustainably and without increasing emissions, before final disposal	Look to recover any remaining value from residual waste prior to disposal at Redruth Landfill.
7	Emissions Emissions from waste are reducing in line with our domestic and international commitments	 Reduce organic waste production and disposal in South Canterbury, from both residents and businesses. Maintain landfill gas capture systems at Redruth Landfill.
8	Contaminated land Contaminated land is sustainably managed and remediated, to reduce waste and emissions and enhance the environment	 Identify and sustainably manage contaminated land in South Canterbury, including vulnerable landfills. Reduce the volume of soil disposal at Redruth Landfill.

3.2.2 Our targets

The Councils' waste minimisation targets are set out in Table 2. The current performance is assessed, and targets are set to align with the NZWS.

Table 2 Waimate District's waste minimisation targets

NZWS target	Local annual target (kg per	WDC			
	capita, tonnes, %)	Baseline 2022	Target 2030		
10% reduction in waste	Total kerbside material	431 kg per capita ¹	388 kg per capita		
generation	Total material received RRPs	1,400 tonnes	<1,400 tonnes		
30% reduction in final	Kerbside refuse collection	112 kg per capita ²	78 kg per capita		
disposal	% contamination in kerbside	Organic <1%	Organic <1%		
	organics, glass, and recycling	Glass <1%	Glass <1%		
		Recycling 3%	Recycling <10%		
	Redruth Landfill disposal from RRPs ³	360 tonnes	250 tonnes		
30% reduction in biogenic methane emissions	% total organics in kerbside rubbish collection	40%	25%		

4 Ka ahatia ā atou paranga? / What happens with our waste?

4.1 Overview of existing waste management and minimisation infrastructure and services

A summary of the current services provided by Council and non-council providers is outlined below. For a detailed description of Council and non-council solid waste services, refer to the joint WA in Part C.

4.1.1 Services provided by Council

The Council currently provides kerbside collections in Waimate and several rural locations. This includes fortnightly kerbside collections for refuse and mixed recycling, with weekly kerbside collections of organics and glass. Kerbside collected material is consolidated and transported for processing or disposal at the Redruth facilities in Timaru. Some peak period collections are also provided such as weekly mixed recycling, rubbish and glass collected at the lake camping sites. The Waimate RRP is used by residents and small commercial customers to dispose of general refuse and drop off recyclables, scrap metal, whiteware, tyres, e-waste, and other recoverable material for further processing. Household hazardous waste, such as batteries, can also be dropped off at the RRP. While most material is consolidated and transported to the Redruth facilities, some recoverable material is transported directly from the district to reprocessors. Some uncontaminated soils from landscaping or construction are received at the RRP where they are disposed as cleanfill.

The waste services contract includes the provision of education initiatives to support the delivery of services and waste minimisation initiatives. A key focus of the education initiatives for Waimate is messaging for residents and businesses using the collection services, ensuring they are effectively utilised to divert waste from landfill. To help improve the diversion potential and ensure materials are put into the correct bins, WDC regularly publish information via communication channels. This includes the website, social media, and physical collateral.

¹ Calculation of kg per capita is based on estimate of service entitled population.

² From January-December 2022.

³ Based on 2022 data at Redruth Landfill. Tonnage covers all disposable materials via councils' facilities.

A range of options are available to the Council to improve, extend and align our waste minimisation and management across the district with the new NZWS and with neighbouring council services, facilities, and initiatives.

4.1.2 Non-council provided services and facilities

Private refuse, greenwaste, and cardboard collection services are available in the district. These services are provided on a user-pays basis for businesses, whereas Council services are rates funded. Private services target customers that do not receive a Council service, such as rural households outside collection areas, or commercial businesses for whom the standard service does not meet their needs.

The NZWS and improved data collection means government departments and private collectors will all now be required to divert waste from landfill. This may result in changes in the waste streams for recyclables, organics and residual waste that come through the Council's RRP.

4.2 Public health protection

The range of public and private waste services in the Waimate District and South Canterbury sub-region ensures public health will be adequately protected in the future. Timaru District Council owns a landfill, organic processing facility, materials recovery facility and reuse shop that is currently meeting the sub-region's needs. The community currently has adequate access to council or privately-owned drop-off and collection services for refuse, recycling, food, greenwaste, hazardous waste and litter, but further waste minimisation is achievable as outlined in this plan. This plan proposes initiatives for continued waste minimisation.

In its feedback on the South Canterbury joint WA, Te Mana Ora | Te Waipounamu feedback from the Medical Officer of Health on 11 August 2023 stated they are supportive of the districts plans and that "this [is an] important service which has significant public health value to the South Canterbury community". This feedback has been considered in the development of this plan.

4.3 Volume and composition of our waste

Kerbside waste collections are highlighted in Figure 3 (for January-December 2022).

Figure 3 Summary of kerbside waste in Waimate

Council introduced full-service kerbside collections in mid-2021. In 2022 the District achieved a diversion rate of 74%. This is already above the national target for 50% diversion at the kerbside by 2030. Waimate has the opportunity to maintain this performance and build success around further opportunities.

The composition of kerbside refuse from Waimate is shown in Figure 4. More than a third of the residual waste could still be diverted. Figure 5 shows that 37% of the waste should be going into Council's organics and recycling bins, and glass crates.

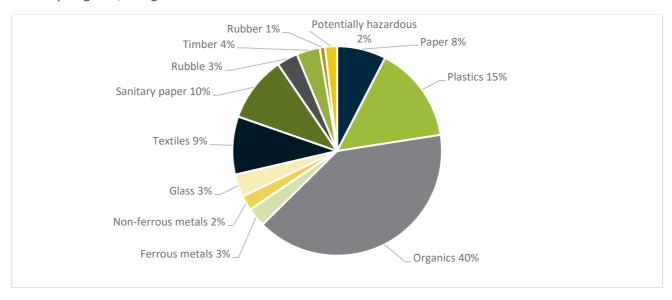

Figure 4 Kerbside refuse composition from a waste audit in 2022

Figure 5 Diversion potential in Waimate's kerbside refuse (residual waste)

The RRP in Waimate enables efficient waste services for the community, including those that do not have access to kerbside services, such as rural households. The waste types and volumes processed through these facilities are highlighted in Figure 6.

Our RRP Waste in Numbers

Figure 6 Total waste from Waimate's Resource Recovery Park⁴

The Waimate RRP is shown in Figure 7.

Figure 7 Image of the Waimate Resource Recovery Park

⁴ For January-December 2022.

4.4 Cost of the current level of service

Council provides its waste services and facilities at an annual cost of \$1.78M (FY2023/24). Funding is predominantly provided through general and targeted rates, with some user charges (Table 3). Solid waste accounts for 6.3% of Council's total operating costs, with 91% of the Solid waste activity funded from rates.

Table 3 Council services currently provided and their funding methods

Council Service	Funding Methods
Waste minimisation education, promotion, enforcement (e.g. by law), communication, monitoring and policy development	Waste levy, central government funds/ grants, general rates, fees and charges
Kerbside collection of waste	Targeted rates
Kerbside collection of recyclables	Targeted rates
Kerbside collection of organics	Targeted rates
Resource Recovery Parks	General rates, fees and charges
Provision of public litter bins	General rates

5 Me pēwhea e pai ake ai? / How much better could we do?

5.1 Council's role

Waimate District Council has already achieved high levels of recycling and organic diversion, surpassing national targets well ahead of time. We are able to do this because we implemented the changes required early and with the support of our community. Now we need to continue to build upon that success by setting objectives and targets that align with new national targets and bring other stakeholders along our journey, particularly in our tourism and construction sectors.

We value our unique landscape and aim to support the community outcomes described in the LTP through this updated WMMP. We contribute to protecting our treasured environment through maintaining our high levels of diversion and seeking opportunities to improve where possible. We have three methods of bringing about the change required, these include:

- 1. Influencing behaviours
- 2. Provision of waste services and facilities
- 3. Regulating how waste services are provided.

5.2 Identified district waste opportunities

Council has identified a range of waste issues and opportunities that currently face our communities. The type of services and facilities required is changing based on the need to reduce waste generation, extract more value from our waste materials and reduce biogenic methane emissions from waste.

1. Promote upstream waste hierarchy and circular economy principles

The opportunity for developing circular economies extend beyond Council limits. There are opportunities to support initiatives developed by others at a local, sub-regional, regional, and national level. This includes promoting the national product stewardship schemes.

To encourage behavioural change and support the community to develop their own initiatives, there are opportunities for Council to strengthen its public awareness campaigns such as through its education provided by EnviroNZ.

2. Recover more from kerbside waste streams

A waste audit in the district in 2022 showed that more than a third of our refuse could be diverted from landfill, mostly organics. Most refuse is disposed of at Redruth Landfill, which does not accept organic waste due to not having efficient landfill gas capture infrastructure. This organic component of our residual waste represents the source of most of our biogenic methane emissions, which will need to be reduced by 30% by 2030. With organic diversion already available to most residents in the district, further uptake of this service can be achieved. The Council will consider providing households with a kitchen caddy to help drive this change in behaviour.

Improved recycling can also help us achieve a high diversion rate. With the implementation of standardised recycling across the nation, Council hopes households will better comply with a simplified list of recyclable items. Soft plastic recycling options will also be considered, some of these materials can be harder to recycle.

3. Better service to rural and business customers

Currently rural households use recycling drop-off points or the Waimate RRP. Similarly, businesses in the area may not use the kerbside service if it doesn't meet their particular needs. Rural and business customers play an important role in this next phase of the Council's WMMP. Since they do not currently have the same access to a comprehensive four-stream collection service that urban residents do, there is an opportunity to divert more by looking at how to enable access to the same level of service.

4. Support diversion activities for C&D waste from landfill

Residual waste from Waimate is taken to Redruth Landfill for disposal. This includes divertible materials including construction and demolition (C&D) waste. Sorting of C&D waste and timber has been tried at Redruth in the past and found not to be cost-effective. Any future solution needs to be supported by sustainable markets. There is a lack of visibility of the alternatives available in South Canterbury to Class 1 landfill disposal i.e. C&D waste diversion or Class 2-5 landfills.

Part B - Action Plan

1 Te tirohanga Whānui o te Mahere Rautaki / Action Plan Overview

Through the assessment of waste within the region, Council has identified four opportunities to address issues in our waste. Each of these opportunities have four grouped actions aligned with the opportunities identified, a fifth action group addresses regulatory and administrative tasks to support the other actions (see Table 4). The opportunities and actions are aligned with the three NZWS goals, as shown in Figure 8. Council also has a set of guiding principles that it will use when developing solid waste initiatives. We note that the actions included in the previous WMMP have either been completed or incorporated into the actions below.

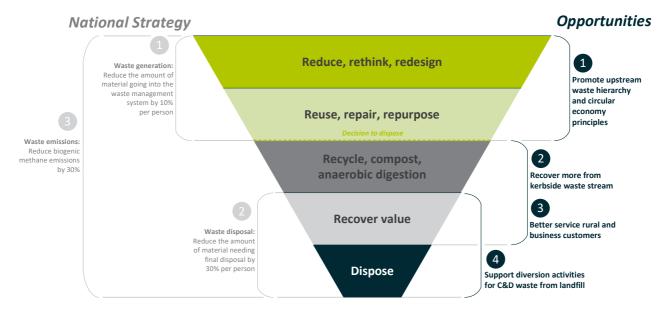

Figure 8 Opportunities aligned to the national waste strategy

Highlighting Our Guiding Principles:

- Addressing legislative requirements
- Recognition of Kaitiakitanga/stewardship
- Application of circular economy principles
- Allowing for integration of technology
- Behaviour change is required to minimise waste, and convenience influences behaviour
- Encouraging innovation
- Leading by example.

Table 4 Action items for Council to address and implement during the 2024-2030 WMMP

Actio	Action		New or Existing	Funding	Implementation timeframe	
1. Pro	1. Promote upstream waste hierarchy and circular economy principles					
1.1.	Provide education programmes to raise awareness of circular economy principles and businesses, products, and services (available now and in the future).	Influence	New	General rates	FY2024/25 onwards	
1.2.	Support the implementation of national product stewardship schemes through the promotion and other use of our RRP as part of the collection network e.g. Crow's Nest outlet at the RRP	Influence	Existing	General rates	Ongoing	
1.3.	Support the development of local circular economy systems through the introduction of funding to encourage waste minimisation initiatives	Influence	New	Grant / Waste Levy Fund	FY2024/25 onwards	
1.4.	Continue to collaborate with other councils, in particular South Canterbury Councils (Timaru and Mackenzie), and the Canterbury Joint Waste Committee on waste minimisation projects.	Influence	Existing	General rates / Waste Levy	Ongoing	
2. Re	cover more from kerbside waste streams					
2.1.	Continue to provide four-bin kerbside collection services (refuse, mixed recycling, glass, and organics) to residents in urban areas and review the extent of the kerbside collection services.	Service	Existing	Targeted rates	Ongoing	
2.2	Review the extent of the kerbside collection services to better service rural residents	Service	New	Targeted rates, waste levy funds	FY2024/25 onwards	

Actio	n	Approach	New or Existing	Funding	Implementation timeframe
2.3.	Introduce kitchen caddies for food scraps to improve uptake of organics service.	Service	New	Grants / Waste Levy Fund	FY2024/25 onwards
2.4.	Continue to provide relevant and updated information to customers via website and other communication channels.	Influence	Existing	General rates / Waste Levy Fund	Ongoing
2.5.	Allow businesses to opt-in to four-bin service if it meets their needs.	Service	Existing	Targeted rates	Ongoing
2.6.	Continue to provide education programmes to schools and businesses to help our community reduce waste and make better decisions about recycling and waste minimisation, including schools programmes.	Influence	Existing	General rates/ Waste Levy Fund	Ongoing
3. Be	tter service rural and business customers				
3.1.	Investigate other options for increasing services for business customers, and rural residents.	Service	New	Waste Levy Fund	Investigate FY2025/26, implement FY2027/28
3.2.	Work with private collectors to offer an equivalent four bin service to business customers.	Influence	New	Private service	FY2025/26 onwards
3.3	Develop education programme specifically for rural households, to encourage appropriate waste disposal, collaborating with farming industry partners	Influence	New	Waste levy funds	FY2025/26
3.4.	Continue to operate the Waimate RRP with separate collection of divertible materials (such as metals, batteries, clothing bins aligned with product stewardship schemes and sustainable markets).	Service	Existing	General rates, fees and charges	Ongoing

Actio	Action		New or Existing	Funding	Implementation timeframe	
3.5	Build more Rural Recycling Depots to increase accessibility and divert more waste from landfill	Service	Existing	General rate / Waste Levy Fund	Ongoing	
4. Su	pport diversion activities for C&D waste					
4.1.	Work with local construction and demolition businesses to develop and deliver targeted education programmes to promote awareness of how to divert waste.	Influence	New	General rates / Waste Levy Fund	FY 2024/25 onwards	
4.2.	Support the implementation of changes to Building Act process requiring waste minimisation plans.	Influence	New	General rates	Once amendments are in place – Long term	
4.3.	Continue to monitor C&D waste quantity and composition at Council RRPs and introduce a targeted SWAP focused on C&D waste in FY2025/26.	Service	Existing New (SWAP)	General rates / Waste Minimisation Fund	Ongoing	
4.4.	Participate in investigating sub-regional C&D waste recovery options.	Influence	New	General rates / Waste Levy Fund	FY 2025/26 onwards	
4.5.	Investigate introducing circular economy requirements into Council infrastructure projects e.g. require waste minimisation plans on construction projects or set minimum recovered material requirements.	Influence	New	General rates / Waste Levy Fund	FY2025/26 onwards	
5. Ot	5. Other actions					
5.1.	Review our Solid Waste Bylaw to ensure it remains current and aligns to this WMMP.	Regulate	Existing	General rates	After this WMMP is published	

Actio	Action		New or Existing	Funding	Implementation timeframe
5.2.	Enforce current restrictions of specific types of waste in kerbside refuse bins, such as food scraps.	Regulate	Existing	General rates	Ongoing and aligns with bylaw review, see Action 5.1.
5.3.	Continue to collect data in accordance with the National Waste Data Framework.	Influence	Existing	General rates	Ongoing
5.4.	Undertake regular SWAP and report progress against WMMP targets on website.	Influence	Existing	General rates / Waste Levy Fund	Ongoing
5.5.	Collaborate with District, Regional and National groups for emergency preparedness for waste services and facilitates. Investigate emergency waste procedures and determine if additional facilities and associated consents are required to support these actions.	Influence and Service	Existing	General rates	Ongoing
5.6.	Continued management of closed landfills	Service	Existing	General rates	Ongoing
5.7.	Incorporate waste minimisation and management in council's procurement processes	Influence	New	General rates	FY2024/25 onwards

1.1 Forecast future demand

Demand on waste services and facilities is linked to population growth. The District's service entitled population was estimated at 5,980 in 2022. The resident population is predicted to increase from 8,320 in 2022 to around 9,000 by 2050. In the short term, annual growth is predicted to be 2%.

The NZWS focuses on the urban-rural divide for household kerbside collections. Currently, only Waimate meets the classification of a small urban area. Glenavy, St Andrews and Makikihi are classified as rural settlements. Since full-service kerbside collections have already been rolled out in these locations, Council is already compliant and ahead of these targets.

The reduction of waste disposal to landfill shown in Figure 9 is expected to come from three initiatives; reduced waste generation from circular initiatives, maintaining high levels of recycling diversion, and increased uptake of organics diversion. A more detailed summary is available in the WA (see Part C).

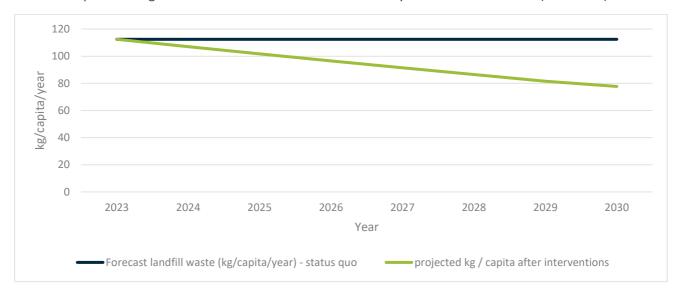

Figure 9 Projected residual waste from kerbside collections sent to landfill

2 Pūtea / Funding

2.1 Funding the plan

The action plan will be funded using the suite of tools available to Council in the delivery of solid waste services. The activities will be funded by:

- General rate
- Targeted rate
- Fees and charges (including gate fees and user charges)
- Subsides and grants, including the Waste Levy Fund and other MfE grants
- Debt (if required for capital works).

2.2 Waste minimisation levy funding expenditure

Council will continue to use the Waste Minimisation Levy funding income to fund waste education, investigations, trials, and to fund capital expenditure for diversion facilities.

2.3 Waste Levy Grants

Section 47 of the WMA gives councils the ability to make grants to a person, organisation, or group to promote or achieve waste management and minimisation. Under this WMMP the Council will continue to give grants at its discretion and on any terms or condition it deems appropriate provided there is an allocated and approved budget for that activity. Specific grants (e.g. for local circular economy initiatives) will also be explored.

3 Te aroturuki, Te arotake me ngā pūrongo o Te ngā ahunga whakamua / Monitoring, evaluating and reporting progress

3.1 Monitoring and evaluation

The Council intends to monitor and report on progress regarding the WMMP and will develop and implement a clear, transparent monitoring and reporting system. Accurate information on how services provided by council are performing is essential for monitoring the effectiveness of the Plan's vision, objectives, goals and targets, and planning for future demand.

Council's current level of service and performance measures are aligned with the 2021-2031 LTP and are focussed on reducing the residential waste to landfill. Council will review its performance measures as part of the 2025-2034 LTP to align with this WMMP.

Measures that provide a broader picture of the waste situation and how to minimise the amount of waste going to landfill will assist Council in identifying more targeted actions in the future. Data will be gathered through:

- Resident and ratepayer surveys every two years
- Contractor reporting against key performance indicators
- Solid Waste Analysis Protocol Audits (SWAPs)
- Waste Assessments
- Consent compliance systems.

3.2 Reporting

The Council will report progress of the implementation and effectiveness of this WMMP through:

- Annual Reports
- Monthly performance reports
- Council's website

The Council will also provide progress reports of expenditure of its waste levy funds to the Ministry for the Environment and provide data in accordance with the national reporting systems.

Glossary

Term	Definitions and abbreviations
Clean fill/clean fill material	Inert materials disposed of, into or onto land, at a consented cleanfill. Materials typically include construction and demolition waste such as concrete, uncontaminated soil and rock.
Commercial waste	Waste from premises used wholly or mainly for the purposes of trade or business, recreation or entertainment, excluding, mines, quarries and agricultural waste. May also include some household waste collected by commercial operators.
Diverted material	Anything no longer required for its original purpose and, but for commercial or other waste minimisation activities, would be disposed of or discarded, and includes any materials that are recyclables, compostable, or can be recovered and/or re-used, as determined by the Council by resolution.
Hazardous waste	Waste that is potentially harmful to human and/or environmental health. It typically has one or more of the following hazard properties: explosive, flammable, oxidising, corrosive, radioactive, toxic or ecotoxic, or it may react with air or water to have one of these properties.
Household waste	Solid waste generated by households. Household waste does not include divertible waste, hazardous waste, commercial waste, prohibited waste, trade waste or liquid waste of any nature.
Organic waste	Compostable materials that are organic in origin and appropriate to be used as feedstock for composting and includes greenwaste and food waste.
Recycling	The reprocessing of waste or diverted material to produce new materials.
Resource Recovery Park (RRP)	A facility where solid waste materials such as residual waste, construction and demolition waste, recyclables, organic wastes and household hazardous wastes are delivered for sorting or before being taken away for treatment, processing, recycling or disposal, and which may also include a retail outlet for the re- sale of used goods and materials deposited at the site.
Reuse shops	Items that are salvaged or diverted from the waste stream undergo little or no modification and are sold at shops run by the community or territorial authorities.
Solid Waste Analysis Protocol (SWAP)	A study to determine the composition of waste as described by Ministry for the Environment.
Transfer Station (TS)	A facility where solid waste materials such as residual waste, construction and demolition waste, recyclables, organics waste and household hazardous wastes are delivered for consolidation before being taken away for treatment, processing, recycling or disposal.
Waste	Anything disposed of, or discarded, and:
	 includes a type of waste that is defined by its composition or source (for example, organic waste, electronic waste, or construction and demolition waste), and
	 to avoid doubt, includes any component or element of diverted material, if the component or element is disposed of or discarded.
Waste disposal levy	A levy imposed under the Waste Minimisation Act 2008 on waste.
Waste minimisation	The reduction of waste and the reuse, recycling and recovery of waste and diverted material.
